MEMORANDUM

SUBJECT: Analytical Results--- **Pavillion#2 2010 / 1010-017**

FROM: Jesse Kiernan, Organic Chemist  
Vicente Martí, Organic and Inorganic Chemist  
William H. Batschelet, PhD, Laboratory Quality Assurance Officer

THRU: Mark Burkhardt, PhD, Director  
Laboratory Services Program

TO: Gregory Oberley, 8EPR-EP  
Clean Water Act

Attached are the analytical results for Pavillion#2 2010 1010-017. The table below shows the number of containers received , the work order number(s) assigned, and the date received:

	1010008	1010009	1010010	Total
06-Oct-2010	12	0	0	12
07-Oct-2010	0	17	0	17
08-Oct-2010	0	0	22	22

These samples were prepared, analyzed, and verified by the Technical and Management Services Laboratory according to the requirements of the Laboratory Services Request (LSR) and procedures found in the laboratory Quality Management Plan dated March 31, 2003.

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" to include data validation and data quality assessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation* November 2002, EPA/240/R-02/004.

**Case Comments**

**Introduction:**

Two water samples plus QC were received on October 6, 2010, three water samples were received on October 7, 2010, and four water samples were received on October 8, 2010 from Pavillions. The samples were prepared and analyzed according to LSR# 1010-017.

**Quality Control Notes:**

Routine sample quality control results such as matrix spikes and laboratory duplicates are reported on the quality control pages of this report. Any results not within QC criteria are discussed in the analyst notes section. Instrument quality control results, such as continuing calibration verification (CCV), continuing calibration blanks (CCB), initial calibration verification (ICV), initial calibration blank (ICB), and instrument blanks (IBL), were within QC criteria unless stated in the analyst notes section. Any missed holding times will also be discussed in the analyst notes section.

**Organics: GC Analysis**

Analysts: Jesse Kiernan,

**Extraction Methods:**

EPA method 5030B, "Purge and Trap for Aqueous Samples," revision 2, December 1996.

EPA method 3520C, "Continuous Liquid-Liquid Extraction," revision 3, December 1996. This procedure was used for the TPH/DRO water sample extractions.

EPA Region 8 laboratory Standard Operating Procedure 508, "Determination of Diesel Range Organics Using 8015B Modified," revision 4.0, October 7, 2009.

**Analytical Methods:**

Modified EPA method 8015D, "Nonhalogenated Organics Using GC/FID," revision 4, May 2003. This method was used for the analysis of the TPH/GRO and TPH/DRO.

EPA Region 8 laboratory SOP ORGM-506, "Determination of BTEX, MTBE, Naphthalene, and TPH/GRO Using 8021B and 8015D Modified," revision 1.0, October 7, 2009.

EPA Region 8 laboratory SOP 508, "Determination of Diesel Range Organics Using 8015B Modified," revision 4.0, October 7, 2009.

**Analyst Notes:**

**BTEX/GRO:**

The surrogate recoveries in sample EPA MW02 (1010009-03) and the gasoline SRM analyzed on October 8, 2010 were above the QC limit due to hydrocarbon interference. No qualification of the data was required.

**TPH/DRO:**

The extract for sample EPA MW02 (1010009-03) was lost during the sample preparation due to a liquid-liquid extractor malfunction. The 8270 extract for this sample was analyzed on the TPH-DRO instrument. Due to the lack of

**Case Comments**

a DRO surrogate value, the result for sample EPA MW02 has been qualified as estimated, "J."

The surrogate recovery for sample LD01 (1010010-02) was below the QC limit. The DRO result for this sample has been qualified as estimated, "J."

Some of the TPH/DRO chromatograms required manual integrations due to poor integration by the quantitation software. The quality of the data was improved by a more realistic quantitation.

**Organics: GC/MS Analysis****EPA Method 8260**

Analyst: Vince Marti and David D. Nguyen

Twelve water samples were received on October 6 - 8, 2010, from the Pavillion project. The samples were prepared and analyzed according to EPA Method 8260 for volatile organics. The compounds 1,3-dimethyl adamantane and adamantane were added to the list of analytes. Samples were received and preserved in ice at  $4 \pm 3^{\circ}\text{C}$ . All samples were analyzed within the holding time of seven days.

**Analysis:**

Twenty-five mL of sample was purged with helium for five minutes at 60 mL per minute. After purging, samples were analyzed by GC/MS calibrated from 0.25ug/L to 10.0 ug/L. The system maintained passing tunes through out the run.

**Analyst Notes:**

Sample results are reported to the method detection levels (MDLs). Results between the MDLs and the reporting levels (RLs) are reported as estimated values ("J" flagged").

Pentachloroethane did not produce a linear or quadratic calibration curve ( $R^2= 0.960$ ). All results for this compound will not be reported. Discussion of further QC failures for this analyte is not necessary.

The standard reference material (1000493-SRM1) had the compounds dichlorofluoromethane and tetrachloroethene with low recoveries. The compound dichlorofluoromethane is "J" flagged as estimated value for all samples. The compound tetrachloroethene had acceptable results in the reference material (1000943-SRM2) and does not need qualification.

The matrix spike (1000493-MS1) and its duplicate (1000493-MSD1) had the compound tetrachloroethene with high recovery. Since the compound is not found in the parent sample, no qualification is required.

The continuous calibration verification OJ18003-CCV2 had the compound tetrachloroethene with high recovery. Since the compound is not found in any of the subsequent samples, no qualification is required. The twelve hour CCV check between this CCV2 and CCV1 was one hour and twelve minutes late. Since the recoveries were within acceptable limits, no qualification is required.

The continuous calibration verification OJ18003-CCV3 had the following compounds with high recoveries: vinyl chloride, bromomethane, chloroethane, trichlorofluoromethane, 1,1-dichloroethane, 2,2-dichloropropane, 1,1,1-trichloroethane, 1,2-dichloroethane and 1,3-dimethyl adamantane. Since the compounds are not found in any of the subsequent samples, no qualification is required.

The continuous calibration verification OJ18003-CCV4 had the compounds 2,2-dichloropropane and tetrachloroethene with high recoveries. Since the compounds are not found in the previous samples, no qualification is

Case Comments

required.

The low level calibration verification (OJ18003-CRL1) had the compound 1,2-dibromo-3-chloropropane with recovery greater than 50%. Since the compound is not found in any of the samples, no qualification is required.

The non-target peaks reported as Tentatively Identified Compounds (TICs) were identified using the NIST05 spectral library and the instrument manufacturer's (Agilent Technologies) search algorithm. To be identified as a TIC, a peak had to have an area at least 10% as large as the area of the nearest internal standard and a match quality greater than 90 %. (The TIC match quality is based in the number and ratio of the major fragmentation ions. A perfect match has a value of 100%.) Although the TIC report is essentially a qualitative report, an estimated concentration is calculated based on a response factor of 1.00 and the area of the nearest internal standard. The search for TIC includes the whole chromatogram from 3.0 to 30.0 minutes.\par NOTE: TICs are compounds that can be detected, but, without the analysis of standards, cannot be confirmed or reliably quantified. Often times TICs are representative of a class of compounds rather than indicating a specific compound.

The following samples had TICs:

**1010009-01 (EPAMW01)**

Cyclohexane..... 26.7 ug/L  
Methyl cyclohexane..... 30.6 ug/L

**1010009-03 (EPAMW02)**

Ethyl methyl sulfide ..... 6.50 ug/L  
Cyclohexane..... 55.5 ug/L  
Methyl cyclohexane..... 19.5 ug/L  
Diethyl sulfide..... 6.25 ug/L  
3-Ethyl toluene..... 45.5 ug/L  
4-Ethyl toluene..... 21.5 ug/L

**1010010-02 (LD01)**

1-Adamantaneacetic acid..... 1.08 ug/L  
2-Methyladamantane..... 1.03 ug/L

**1010010-03 (LD01 dup)**

Adamantane-1-carboxylic acid..... 0.43 ug/L  
2-Methyladamantane..... 0.43 ug/L

**EPA Method 8270**

Analyst: Vince Marti and David D. Nguyen

Nine 1-Liter water samples were received on October 6 - 8, 2010, from the Pavillion project. The samples were prepared and analyzed according to EPA Method 8270 for semi-volatile organics. Samples were received and preserved in ice at  $4 \pm 3$  °C. All samples were analyzed within the holding time of seven days.

**Analysis:**

Samples for semi-volatile analysis were prepared and extracted according to SW-846 method 3520, "Continuous Liquid-Liquid Extraction" for water samples. One liter of sample was pH adjusted to less than 2 with 50-50 hydrochloric acid, extracted with methylene chloride, and the extract concentrated to a final volume of one milliliter. Samples were analyzed following EPA Method 8270. The instrument was calibrated from 0.1 ug/mL to 10.0 ug/mL.

Case Comments

## Analyst Notes:

Sample 101009-01 (MW01) and 101009-03 (MW02) had an initial pH greater than 12. These required additional acid to reach a pH less than 2 and foamed vigorously during extraction.

The blank spikes (1000516-BS1 and 1000516-BS2) had low recoveries for the following compounds: aniline and hexachlorocyclopentadiene, these compounds are "J" flagged as estimated values for all samples. The compounds 4-chloroaniline and pentachlorophenol had high recoveries. All detects for these compounds are "J" flagged as estimated values.

The matrix spike (1000516-MS1) and its duplicate (1000516-MSD1) had low recoveries for the compounds aniline and hexachlorocyclopentadiene, these compounds are already qualified due to low recovery of the blank spike; no further qualification is required. Pentachlorophenol had high recovery in both the matrix spike and its duplicate. Since this compound was not detected in the parent sample no qualification is required.

The initial calibration verification (0J25006-ICV1) had low recoveries for the following compounds: hexachlorocyclopentadiene, indeno(1,2,3-cd)pyrene and dibenz(a,h)anthracene. These compounds are "J" flagged as estimated values for all samples. The compounds 4-chloroaniline, 3-nitroaniline and pentachlorophenol had high recoveries. All detects for these compounds are "J" qualified as estimated values.

The continuous calibration verification (0J25006-CCV1) had the following compounds with low recoveries: indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene. These compounds are "J" flagged as estimated values for the associated samples. Pentachlorophenol had high recovery. All detects for this compound are "J" qualified as estimated values.

The 0J25006-CCV2, CCV3 and CCV4 had the compounds 4-nitroaniline and pentachlorophenol with high recoveries. Since the compounds are allready qualified , no further qualification is required.

Manual integrations were performed.

The non-target peaks reported as Tentatively Identified Compounds (TICs) were identified using the NIST05 spectral library and the instrument manufacturer's (Agilent Technologies) search algorithm. To be identified as a TIC, a peak had to have an area at least 10% as large as the area of the nearest internal standard and a match quality greater than 90 %. (The TIC match quality is based in the number and ratio of the major fragmentation ions. A perfect match has a value of 100%.) Although the TIC report is essentially a qualitative report, an estimated concentration is calculated based on a response factor of 1.00 and the area of the nearest internal standard. The search for TIC includes the whole chromatogram from 3.0 to 30.0 minutes.\par NOTE: TICs are compounds that can be detected, but, without the analysis of standards, cannot be confirmed or reliably quantified. Often times TICs are representative of a class of compounds rather than indicating a specific compound.

The following samples had TICs:

**101008-01 (RD01)**

1,2-benzenedicarboxylic acid ..... 0.76 ug/L

**101008-02 (RD01 Field blank)**

Benzoic acid, methyl ester ..... 0.50 ug/L  
Benzophenone ..... 0.37 ug/L

**101009-01 (EPAMW01) pH>12**

Heptanoic acid..... 5.00 ug/L

Case Comments

Octanoic acid ..... 12.7 ug/L  
 Dodecanoic acid ..... 37.6 ug/L

**101009-02 (Trip Blank)**

Caprolactam ..... 1.18 ug/L

**101009-03 (EPAMW02) pH>12**

1-Methylcyclohexanol ..... 80.02 ug/L  
 2-Methylcyclohexanol ..... 18.0 ug/L  
 1-ethyl-2-methyl-benzene ..... 16.5 ug/L  
 Dodecanoic acid ..... 8.10 ug/L  
 Propylparaben ..... 13.6 ug/L

**1010010-01 (EQ Blk)**

Methyl ester benzoic acid ..... 0.42 ug/L  
 Methylparaben ..... 0.43 ug/L  
 Benzophenone ..... 0.32 ug/L  
 Cyclotetradecane ..... 0.37 ug/L

**1010010-02 (LD01)**

Cyclic octaatomic sulfur ..... 0.42 ug/L

**1010010-03 (LD01 dup)**

Cyclic octaatomic sulfur ..... 0.66 ug/L

**1010010-04 (LD02)**

Cyclic octaatomic sulfur ..... 8.10 ug/L  
 2-Propenoic acid -2-methyl ester ..... 1.87 ug/L  
 4,4'-Diocetylphenylamine ..... 1.05 ug/L

**EPA Method 8270 with special compounds**

Analyst: Vince Marti and David D. Nguyen

Nine 1-Liter water samples were received on October 6 - 8, 2010, from the Pavillion project. The samples were prepared and analyzed according to modified EPA Method 8270 for semi-volatile organics. Samples were received and preserved in ice at  $4 \pm 3^{\circ}\text{C}$ . All samples were analyzed within the holding time of seven days.

**Analysis:**

Samples for semi-volatile analysis were prepared and extracted according to SW-846 method 3520, "Continuous Liquid-Liquid Extraction" for water samples. One liter of sample was pH adjusted to less than 2 with 50-50 hydrochloric acid, extracted with methylene chloride, and the extract concentrated to a final volume of one milliliter. Samples were analyzed by modified EPA Method 8270 for the following compounds: 2-butoxy ethanol, 2-butoxy ethanol phosphate, adamantane, limonene, 1,3-dimethyl adamantane, squalene and terpinol. The instrument was calibrated from 0.1 ug/mL to 10.0 ug/mL.

**Analyst Notes:**

Sample results are reported to the method detection levels (MDLs). Results between the MDLs and the reporting levels (RLs) are reported as estimated values ("J" flagged").

Case Comments

Sample 1010009-01 (MW01) and 1010009-03 (MW02) had an initial pH greater than 12. These required additional acid to reach a pH less than 2 and foamed vigorously during extraction.

The initial calibration verification (0J27001-ICV1) had high recovery for 2-butoxy ethanol phosphate. This compound is "J" flagged as an estimated value for all samples with detection of this compound.

The continuous calibration verification (0J27001-CCV1), (0J27001-CCV2), and (0J27001-CCV3) had 2-butoxy ethanol phosphate with high recoveries. All detections of this compound are already "J" flagged as estimated values. No further qualification is required.

The matrix spike (1000517-MS1) and its duplicate (1000517-MSD1) had 2-butoxy ethanol phosphate with high recovery. The compound is already qualified as an estimated value. No additional qualification is required.

The second tune check and the CCV2 missed the twelve hour clock by one hour and ten minutes. Since both the tune check and the CCV had acceptable results, no data was qualified.

Manual integrations were performed.

Surrogate: Nitrobenzene-d5	3.74		"	5.00		74.8	40-110		
Surrogate: Phenol-d6	3.93		"	5.00		78.6	10-115		
Surrogate: Terphenyl-d4	4.93		"	5.00		98.6	50-135		

## NOTE:

%REC is percent recovery. Result (less sample contribution) divided by the Spike Level

RPD is the Relative Percent Difference (difference between the Result and the Source Result) divided by their average
